

FEATURES AND BENEFITS

Available in one and three compartments, Earth Plus containers are microwaveable and heat lamp safe, and are made from mineral filled polypropylene that resists grease and moisture and keeps hot foods hot and cold foods cold.

These combo containers are made with a 40% natural mineral additive that reduces the amount of oil-based resin used, resulting in a product with less plastic that is better for the environment.

A "four corner" lock features an audible click to indicate full closure, preventing accidental openings and spills. A perimeter seal and soak proof material also provide leak resistance, providing extra security during transport.

Perfect for leftovers, to-go, delivery and drive-thru applications, these containers feature a ribbed design for superb strength when stacking in delivery bags, along with optional vents that let steam out on the sides, eliminating condensation and keeping foods hot and crispy.

Designed to be re-used multiple times, this product has great appeal to environmentally conscious patrons who are looking to reduce overall material use and promote sustainability.

Meets all FDA packaging requirements for food contact, is made from recyclable materials and is also 100% recyclable. Please refer to your local municipal waste management regulations.
